Security Surveillance Video Cameras

LQC Services, Inc.

Excellence in technology services

Surveillance cameras are not just for banks anymore...

The banking industry has long relied on video surveillance to both deter theft and to aid in the capture of robbers.

Unfortunately, you probably have firsthand experience with the costs of construction site theft and vandalism. The good news is that continued advances in technology and lower prices make video surveillance cameras both effective and affordable.

LQC Services has served the small business community in Colorado Springs for over 15 years with professional computer, networking and computer-based technology services. Let us help your business today.

Video Cameras Today

Security cameras can serve several purposes. Two of the most important ones are to act as a deterrent to prevent crime, and secondly, in the event of an incident, to provide quality images fast to successfully track down the perpetrators. Older technology cameras use continuous recording which presents two drawbacks, they consume a large amount of storage space and you can end up spending hours looking for a crucial event.

LQC uses MOBOTIX cameras which are equipped with LED's that switch on whenever motion of any kind is detected in their exposure zones. Thanks to the event-controlled image recording, the cameras only begin recording when they register movement anywhere in a pre-defined field. Only these event-driven images are uploaded saving both storage capacity and time.

Pricing...

Always of primary importance to the business owner is the cost and the benefits. Some contractors may decide to simply buy the cameras (\$1000 to \$1500 per camera) and have LQC move them from job to job. We can also create a wireless camera solution so that network cabling is not needed from the jobsite trailer to the pole-mounted cameras. Our wireless equipment is mounted in a weather-tight box that typically costs on the order of \$300 per unit.

Benefits...

Friends and enemies

During the day, the cameras can provide real-time information on the activity and

progress for the jobsite. An expert problem-solver can be contacted and asked to view a particular construction problem for advice by logging into your Internet jobsite camera address. As for the enemies, they are no longer anonymous.

Valuable equipment and tools

Theft prevention and theft recovery. Surveillance cameras are key in both. Many insurance companies offer reduced rates for jobsites that incorporate good security measures.

Day or night

Alarm modes for the cameras are usually set to go active after work hours. Dual lenses allow these cameras to detect and record activity even at night. This is one watchdog that never sleeps!

Call today for an appointment to discuss how these security cameras might work for you!
